Namespace: ""

Schema(s)

Main schema fdk_content.xsd

Namespace	No namespace
Annotations	This document provides specification for XML that describe drivers, applications and other software modules (from here on called modules) in the Atmel Software Framework. Upon start the parser will scan though the ASF directory structure for al asf.xml files, strip the "asf" tag and then include all elements into one XML file. The resulting XML file is used as a database for all software modules in the ASF. The database can be used to resolve dependencies for any module in the ASF, and find other information regarding the software modules.

Element(s)

Element asf

Namespace	No namespace
Annotations	Top level element for any build system XML file. Each XML file can be validated with this XML Schema.

Diagram	Model	project{0,1} | device-map{0,1} | device-alias-map{0,1} | board{0,1} | module{0,1} | select-by-device{0,1} | select-by-config{0,1} | framework-version{0,1} | documentation{0,1}
Children	board, device-alias-map, device-map, documentation, framework-version, module, project, select-by-config, select-by-device

Instance	<pre><asf xmlversion="">
	  <project caption="" default-mcu="" id="" type="" workspace-name="">{0,1}</project>
	  <device-map id="">{0,1}</device-map>
	  <device-alias-map name="">{0,1}</device-alias-map>
	  <board caption="" id="" vendor="">{0,1}</board>
	  <module caption="" id="" type="">{0,1}</module>
	  <select-by-device caption="" id="">{0,1}</select-by-device>
	  <select-by-config caption="" default="" id="" name="">{0,1}</select-by-config>
	  <framework-version name="">{0,1}</framework-version>
	  <documentation baseurl="">{0,1}</documentation>
	</asf></pre>

Attributes

QName	Type	Fixed	Default	Use
xmlversion	restriction of xs:string			required
	ASF XML version. Current version is 1.0			

Element `project`

Namespace	No namespace
Annotations	A project is an application that is configured for a specific board. An application is described with the module tag. A project description is the starting point for the project generator, and must at least state: 1. which board the project makes use of 2. which project generators can be used 3. which application the project is for

Diagram	Used by	Element asf

Model	board-addon* | build* | require* | require-external* | info* | config* | toolchain-config* | toolchain-config-list* | generator* | related-module* | device-support+
Children	board-addon, build, config, device-support, generator, info, related-module, require, require-external, toolchain-config, toolchain-config-list

Instance

```
<project caption="" default-mcu="" id="" type="" workspace-name="">
  <board-addon caption="" position="" vendor="">{0,unbounded}</board-addon>
  <build name="" subtype="" toolchain="" type="" value="">{0,unbounded}</build>
  <require idref="">{0,unbounded}</require>
  <require-external eidref="" idref="">{0,unbounded}</require-external>
  <info type="" value="">{0,unbounded}</info>
  <config name="" value="">{0,unbounded}</config>
  <toolchain-config name="" toolchain="" value="">{0,unbounded}</toolchain-config>
  <toolchain-config-list name="" toolchain="" value="">{0,unbounded}</toolchain-config-list>
  <generator default-mcu="" value="">{0,unbounded}</generator>
  <related-module module-id="" type="">{0,unbounded}</related-module>
  <device-support value="">{1,unbounded}</device-support>
</project>
```

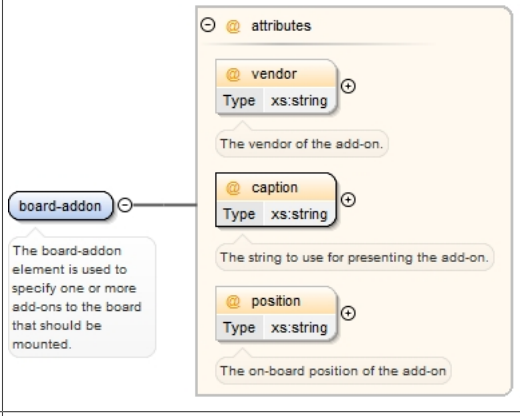
Attributes

QName	Type	Fixed	Default	Use
caption	xs:string			required
	Description of the project			
default-mcu	xs:string			optional
	Description of the project			
id	asfId			required
	Unique id			
type	restriction of xs:string			optional
	Type of project			
workspace-name	restriction of xs:string			optional
	Optional name to use for the project in generated workspaces.			

Element board-addon

Namespace	No namespace
Annotations	The board-addon element is used to specify one or more add-ons to the board that should be mounted.

Diagram



Used by	Element project

Attributes

QName	Type	Fixed	Default	Use
caption	xs:string			required
	The string to use for presenting the add-on.			
position	xs:string			optional
	The on-board position of the add-on			
vendor	xs:string			optional
	The vendor of the add-on.			

Element build

Namespace	No namespace
Annotations	The build element is used for specifying what files, defines and include paths are needed for a given module, or how the documentation can be accessed.

Diagram	Used by	Elements board, module, project

Attributes

QName	Type	Fixed	Default	Use
name	xs:string			optional
	`The name of the build type. This is used for define builds.`			
subtype	restriction of xs:string			optional
	`The subtype of build entity`			
toolchain	generatorType			optional
	`Build element is only valid for the toolchain with the given name`			
type	restriction of xs:string			required
	`The type of build entity`			
value	xs:string			required
	`The build element`			

Element `require`

Namespace	No namespace
Annotations	`The require element is used for specifying what other modules is needed by a module.`
Diagram	Used by	Elements board, module, project

Attributes

QName	Type	Fixed	Default	Use
idref	asfId			required
	`The id of the required element`			

Element `require-external`

Namespace	No namespace
Annotations	`The require-external element is used for specifying what other modules from a different extension is needed by a module.`

Diagram	Used by	Elements board, module, project

Attributes	QName	Type	Fixed	Default	Use
	eidref	fdkEid			required
		The id of the external dependency to get module from. This is defined in the extension description.			
	idref	asfId			required
		The id of the required element			

Element `info`

Namespace	No namespace
Annotations	The info element is used for specifying additional information on a module
Diagram	Used by	Elements board, module, project, select-by-config, select-by-device
Model	keyword
Children	keyword

Instance	`<info type="" value="">`
	`  <keyword value="">{1,1}</keyword>`
	`</info>`

Attributes	QName	Type	Fixed	Default	Use
	type	restriction of xs:string			optional
		The type of information entity. The following types are supported: - keyword TBD - appnote Appnote number for related appnote. Ex: AVR123 - description Textual description of the module. Can be of type: * summary - Quick "one line" description. * detailed - Longer, more detailed description. The exact guidelines are TBD.			
	value	xs:string			required
		The actual information, or category for blocks of keywords:			

	QName	Type	Fixed	Default	Use
		- kit - device - technology - application			

Element keyword

Namespace	No namespace
Diagram	Used by	Element info

Attributes	QName	Type	Fixed	Default	Use
	value	xs:string			required
		A keyword.			

Element config

Namespace	No namespace
Annotations	The config element is used to set the value of a configuration setting.
Diagram	Used by	Elements board, project

Attributes	QName	Type	Fixed	Default	Use
	name	xs:string			required
		The name of the configuration setting.			
	value	xs:string			required
		The value to set for the configuration.			

Element toolchain-config

Namespace	No namespace
Annotations	The config element is used to set the value of a toolchain configuration.

Diagram	Used by	Elements board, module, project

Attributes	QName	Type	Fixed	Default	Use
	name	xs:string			required
		`The name of the toolchain configuration.`			
	toolchain	generatorType			required
		`Toolchain configuration is only valid for the toolchain with the given name`			
	value	xs:string			required
		`The value to set for the toolchain configuration.`			

Element `toolchain-config-list`

Namespace	No namespace
Annotations	`The config element is used to add a value to a toolchain configuration.`
Diagram	Used by	Elements board, module, project

Attributes	QName	Type	Fixed	Default	Use
	name	xs:string			required
		`The name of the toolchain configuration.`			
	toolchain	generatorType			required
		`Toolchain configuration is only valid for the toolchain with the given name`			
	value	xs:string			required
		`The value to add to the toolchain configuration.`			

Element `generator`

Namespace	No namespace
Annotations	`Add a generator to a project.`

Diagram	Used by	Elements module, project

Attributes	QName	Type	Fixed	Default	Use
	default-mcu	xs:string			optional
		`Only allowed when value="doxygen-module".`			
	value	generatorType			required
		`This restricted value define a set of generator which is used to generate project files for a project.`			

Element `related-module`

Namespace	No namespace
Annotations	`The related-module element is used to describe relations between modules.`
Diagram	Used by	Elements board, module, project

Attributes	QName	Type	Fixed	Default	Use
	module-id	asfId			required
		`The ID of the related module`			
	type	relatedModuleType			required
		`How the module is related`			

Element `device-support`

Namespace	No namespace
Diagram	Used by	Elements board, device-alias-map, module, project

Attributes	QName	Type	Fixed	Default	Use
	value	xs:string			optional
		`Idenfifier of device that is supported. For example atxmega128a1.`			

Element `device-map`

Namespace	No namespace

Annotations	The device-map is used for specifying the selection process of a select-by-device tag and device-support elements.
Diagram	Used by	Element asf
Model	group+
Children	group
Instance	<device-map id=""> <group doc-arch="" name="">{1,unbounded}</group> </device-map>

Attributes	QName	Type	Fixed	Default	Use
	id	asfId			required
		Unique id of device-map.			

Element group

Namespace	No namespace
Annotations	Familly group name
Diagram	Used by	Elements device-map, group
Model	group | mcu
Children	group, mcu
Instance	<group doc-arch="" name=""> <group doc-arch="" name="">{1,1}</group> <mcu name="">{1,1}</mcu> </group>

Attributes	QName	Type	Fixed	Default	Use
	doc-arch	xs:string			optional
		Specify that this is an "architecture" for grouping of documentation, and the name to use.			
	name	xs:string			required
		Name of the family group. For example uc3a.			

Element mcu

Namespace	No namespace
Annotations	MCU name
Diagram	Used by	Element group

Attributes

QName	Type	Fixed	Default	Use
name	xs:string			required
	Name of the MCU. For example atxmega128a1			

Element device-alias-map

Namespace	No namespace
Annotations	Specify a custom group of devices
Diagram	Used by	Element asf
Model	device-support+
Children	device-support
Instance	<device-alias-map name=""> <device-support value="">{1,unbounded}</device-support> </device-alias-map>

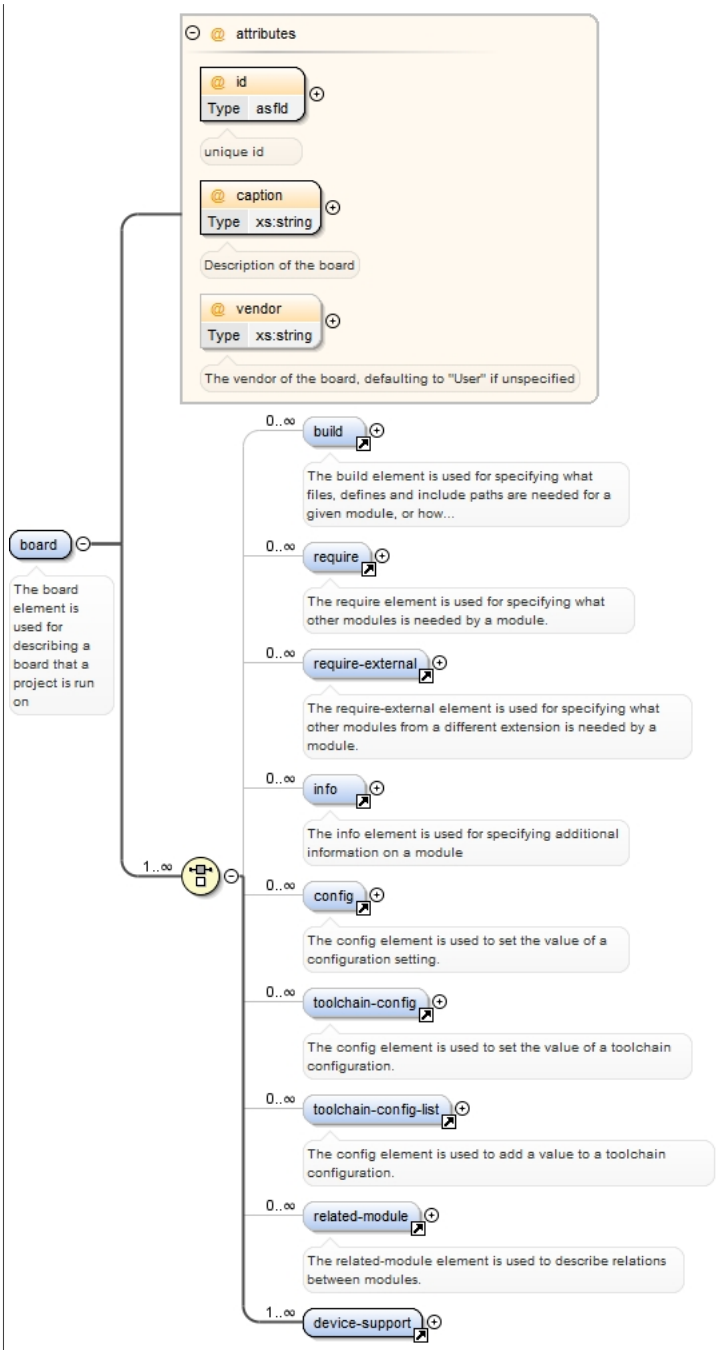
Attributes

QName	Type	Fixed	Default	Use
name	xs:string			required
	Unique name of the device alias			

Element board

Namespace	No namespace
Annotations	The board element is used for describing a board that a project is run on

Diagram



Used by

Element asf

Model

build* | require* | require-external* | info* | config* | toolchain-config* | toolchain-config-list* | related-module* | device-support+

Children

build, config, device-support, info, related-module, require, require-external, toolchain-config, toolchain-config-list

Instance

```
<board caption="" id="" vendor="">
  <build name="" subtype="" toolchain="" type="" value="">{0,unbounded}</build>
  <require idref="">{0,unbounded}</require>
  <require-external eidref="" idref="">{0,unbounded}</require-external>
  <info type="" value="">{0,unbounded}</info>
  <config name="" value="">{0,unbounded}</config>
  <toolchain-config name="" toolchain="" value="">{0,unbounded}</toolchain-config>
  <toolchain-config-list name="" toolchain="" value="">{0,unbounded}</toolchain-config-list>
  <related-module module-id="" type="">{0,unbounded}</related-module>
  <device-support value="">{1,unbounded}</device-support>
</board>
```

Attributes

QName	Type	Fixed	Default	Use
caption	xs:string			required
	Description of the board			

QName	Type	Fixed	Default	Use
id	asfId			required
	`unique id`			
vendor	xs:string			optional
	`The vendor of the board, defaulting to "User" if unspecified`			

Element `module`

Namespace	No namespace
Diagram	Used by	Elements asf, select-by-config, select-by-device
Model	build* | require* | require-external* | info* | device-support* | device-support-alias* | toolchain-config* | toolchain-config-list* | generator* | related-module*
Children	build, device-support, device-support-alias, generator, info, related-module, require, require-external, toolchain-config, toolchain-config-list

Instance

```
<module caption="" id="" type="">
  <build name="" subtype="" toolchain="" type="" value="">{0,unbounded}</build>
  <require idref="">{0,unbounded}</require>
  <require-external eidref="" idref="">{0,unbounded}</require-external>
  <info type="" value="">{0,unbounded}</info>
  <device-support value="">{0,unbounded}</device-support>
  <device-support-alias value="">{0,unbounded}</device-support-alias>
  <toolchain-config name="" toolchain="" value="">{0,unbounded}</toolchain-config>
  <toolchain-config-list name="" toolchain="" value="">{0,unbounded}</toolchain-config-list>
  <generator default-mcu="" value="">{0,unbounded}</generator>
  <related-module module-id="" type="">{0,unbounded}</related-module>
</module>
```

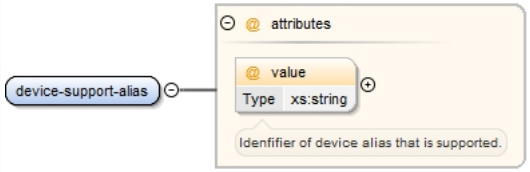
Attributes

QName	Type	Fixed	Default	Use
caption	xs:string			required
	Description of the module			
id	asfId			required
	Unique id for module			
type	restriction of xs:string			required
	The type of the module. It can be : - driver - component - service - library - application - meta - build-specific			

Element `device-support-alias`

Namespace: No namespace

Diagram



Used by: Element module

Attributes

QName	Type	Fixed	Default	Use
value	xs:string			optional
	Idenfifier of device alias that is supported.			

Element `select-by-device`

Namespace: No namespace

Annotations

```
The select-by-device element is used for resolving device dependent modules.
It will try to find a module within the tag that contains the same id, with a hash and the device
 appended.
It starts searching at the MCU in the device-map and then to each parent node, until a match is
 found.
This ensures that a driver for one specific device has higher priority than a family generic driver.
```

Diagram	Used by	Elements asf, select-by-config
Model	info* | module*
Children	info, module

Instance	`<select-by-device caption="" id="">`
	`  <info type="" value="">{0,unbounded}</info>`
	`  <module caption="" id="" type="">{0,unbounded}</module>`
	`</select-by-device>`

Attributes

QName	Type	Fixed	Default	Use
caption	xs:string			optional
	Description of the selector			
id	asfId			required
	Unique ID			

Element `select-by-config`

Namespace	No namespace
Annotations	The select-by-config element is used for resolving configuration dependent modules. It will try to find a module within the tag that contains the same id, with a hash and the configuration appended.

Diagram	Used by	Elements asf, select-by-config
Model	info* | select-by-config* | select-by-device* | module+
Children	info, module, select-by-config, select-by-device

Instance	`<select-by-config caption="" default="" id="" name="">`
	`  <info type="" value="">{0,unbounded}</info>`

Attribute generator / @value

Namespace	No namespace	
Annotations	This restricted value define a set of generator which is used to generate project files for a project.	
Facets	enumeration	verbose
	enumeration	avrgcc

	enumeration	avr32gcc
	enumeration	armgcc
	enumeration	iarew
	enumeration	iarew32
	enumeration	iarewarm
	enumeration	doxygen
	enumeration	doxygen-module
	enumeration	as5_8
	enumeration	as5_32
	enumeration	as5_arm
	enumeration	as5_8_template
	enumeration	as5_32_template
	enumeration	as5_arm_template
Used by	Element	generator

Attribute `generator / @default-mcu`

Namespace	No namespace	
Annotations	`Only allowed when value="doxygen-module".`	
Used by	Element	generator

Attribute `related-module / @type`

Namespace	No namespace	
Annotations	`How the module is related`	
Facets	enumeration	example
	enumeration	unit-test
Used by	Element	related-module

Attribute `related-module / @module-id`

Namespace	No namespace	
Annotations	`The ID of the related module`	
Facets	pattern	`[a-z0-9\.\-_#]+`
Used by	Element	related-module

Attribute `device-support / @value`

Namespace	No namespace	
Annotations	`Idenfifier of device that is supported. For example atxmega128a1.`	
Used by	Element	device-support

Attribute `project / @id`

Namespace	No namespace	
Annotations	`Unique id`	
Facets	pattern	`[a-z0-9\.\-_#]+`
Used by	Element	project

Attribute `project / @caption`

Namespace	No namespace
Annotations	`Description of the project`

Used by	Element	project

Attribute `project / @default-mcu`

Namespace	No namespace	
Annotations	Description of the project	
Used by	Element	project

Attribute `project / @type`

Namespace	No namespace	
Annotations	Type of project	
Facets	enumeration	normal
	enumeration	template
	enumeration	unit-test
Used by	Element	project

Attribute `project / @workspace-name`

Namespace	No namespace	
Annotations	Optional name to use for the project in generated workspaces.	
Facets	pattern	[a-z0-9\-_]+
Used by	Element	project

Attribute `mcu / @name`

Namespace	No namespace	
Annotations	Name of the MCU. For example atxmega128a1	
Used by	Element	mcu

Attribute `group / @name`

Namespace	No namespace	
Annotations	Name of the family group. For example uc3a.	
Used by	Element	group

Attribute `group / @doc-arch`

Namespace	No namespace	
Annotations	Specify that this is an "architecture" for grouping of documentation, and the name to use.	
Used by	Element	group

Attribute `device-map / @id`

Namespace	No namespace	
Annotations	Unique id of device-map.	
Facets	pattern	[a-z0-9\.\-_#]+
Used by	Element	device-map

Attribute `device-alias-map / @name`

Namespace	No namespace	
Annotations	Unique name of the device alias	
Used by	Element	device-alias-map

Attribute `board / @id`

Namespace	No namespace	
Annotations	`unique id`	
Facets	pattern	`[a-z0-9\.\-_#]+`
Used by	Element	board

Attribute `board / @caption`

Namespace	No namespace	
Annotations	`Description of the board`	
Used by	Element	board

Attribute `board / @vendor`

Namespace	No namespace	
Annotations	`The vendor of the board, defaulting to "User" if unspecified`	
Used by	Element	board

Attribute `device-support-alias / @value`

Namespace	No namespace	
Annotations	`Idenfifier of device alias that is supported.`	
Used by	Element	device-support-alias

Attribute `module / @id`

Namespace	No namespace	
Annotations	`Unique id for module`	
Facets	pattern	`[a-z0-9\.\-_#]+`
Used by	Element	module

Attribute `module / @caption`

Namespace	No namespace	
Annotations	`Description of the module`	
Used by	Element	module

Attribute `module / @type`

Namespace	No namespace	

Annotations	`The type of the module.`
	`It can be :`
	`- driver`
	`- component`
	`- service`
	`- library`
	`- application`
	`- meta`
	`- build-specific`	

Facets	enumeration	`driver`
	enumeration	`component`
	enumeration	`service`

	enumeration	`library`
	enumeration	`application`
	enumeration	`meta`
	enumeration	`build-specific`
Used by	Element	module

Attribute `select-by-device / @id`

Namespace	No namespace	
Annotations	`Unique ID`	
Facets	pattern	`[a-z0-9\.\-_#]+`
Used by	Element	select-by-device

Attribute `select-by-device / @caption`

Namespace	No namespace	
Annotations	`Description of the selector`	
Used by	Element	select-by-device

Attribute `select-by-config / @id`

Namespace	No namespace	
Annotations	`Unique ID`	
Facets	pattern	`[a-z0-9\.\-_#]+`
Used by	Element	select-by-config

Attribute `select-by-config / @name`

Namespace	No namespace	
Annotations	`Name of the configuration to use for this selector.`	
Used by	Element	select-by-config

Attribute `select-by-config / @default`

Namespace	No namespace	
Annotations	`The default value of the configuration if no value is configured.`	
Used by	Element	select-by-config

Attribute `select-by-config / @caption`

Namespace	No namespace	
Annotations	`Description of the selector`	
Used by	Element	select-by-config

Attribute `framework-version / @name`

Namespace	No namespace	
Annotations	`Release identifier name of the Atmel Software Framework`	
Used by	Element	framework-version

Attribute `documentation / @baseurl`

Namespace	No namespace	
Annotations	`Base URL for documentation`	

Used by	Element	documentation

Attribute `asf / @xmlversion`

Namespace	No namespace	
Annotations	`ASF XML version. Current version is 1.0`	
Facets	enumeration	`1.0`
Used by	Element	asf
